April 7, 2017

Dear Mr. Ivan Stanojevic,

    We're pleased to officially welcome you to the International Space Apps Challenge community as the local host of Space Apps Belgrade, Serbia. We rely on our local hosts, like you, to make Space Apps successful.

    As you know, the International Space Apps Challenge is a two-day hackathon where teams of technologists, scientists, designers, artists, educators, entrepreneurs, developers and students across the globe collaborate and engage with publicly available data to design innovative solutions to global challenges. Space Apps is an open innovation program that enables NASA to harness the expertise, ingenuity, and creativity of global citizens to address humanity's most pressing technology challenges.

    This year you are one of over 100 locations around the world spanning six continents. Experts from across NASA and our collaborating agencies have carefully crafted challenges for teams to aggregate around. Our 2017 event will be held the weekend of April 29-30.

    The Space Apps community is working to invent the future and answer some of the world's most pressing challenges. Your efforts to nurture a volunteer community of solvers will help us approach these challenges with fresh perspectives and innovative solutions. We look forward to engaging with you and your local participants as we gear up for this year's event.

    If you have any questions, please reach out to me at blake.garcia@spaceappschallenge.org.
